## Fire Detection Devices Information Bulletin

Fire Detection Devices Ltd. is proud to announce the first issue of “**Celsius 232 Information Bulletin**” for the fire alarm industry. The bulletin can be found under the “News” tab at [www.firedetectiondevices.com](http://www.firedetectiondevices.com).

**Celsius 232** will provide thought provoking articles relating to the use of conventional heat detectors, codes and standards as well as educational material.

The inaugural edition is titled “Conventional System Troubleshooting” and is the first in a series of technical documents to be used as a review for entry level fire alarm technicians. The article suggests various techniques to isolate trouble signals by confirming circuit integrity and verifying the functionality of the power supply. Future editions will include topics such as trouble conditions, opens, shorts and ground faults.
